

Inventory and Analysis of Short-Term Rentals in Pennsylvania

By: Alison E. Feeney, Ph.D., Shippensburg University of Pennsylvania.

Abstract: This project provides an in-depth inventory of short-term rentals (STRs) in Pennsylvania, using AirDNA data from 2008–2023, and mapped STR locations in a Geographic Information System (GIS). The growth of STRs in Pennsylvania has been remarkable, beginning modestly in 2008 and expanding rapidly over the next 15 years. What started with just a handful of properties grew into a substantial market by 2023, with 53,810 active listings across all 67 counties. The STR market's evolution reflects broader trends in the sharing economy, with properties ranging from luxury apartments to unique accommodations like yurts and houseboats. The financial performance of these rentals also saw significant growth, with total revenue reaching \$856.7 million in 2023. This growth highlights the increasing importance of STRs within Pennsylvania's tourism and housing markets, as well as their diverse appeal across both urban and rural areas. This project examines the distribution of STRs across Pennsylvania historically at the statewide level and analyzes 20 municipalities for housing characteristics, occupancy rates, economics, maximum quests, and bedrooms to gain insights into potential housing issues. The analysis shows how urban areas like Harrisburg, Erie, and Allentown leverage their economic bases and historical significance to attract STRs. In contrast, rural areas like Gettysburg, Jim Thorpe, and State College see growth driven by tourism linked to historical sites, natural beauty, and educational institutions. The research highlights disparities in Average Daily Rates (ADR) and occupancy rates between urban and rural areas, emphasizing the need for tailored policies for each. As STRs grow in popularity, this study offers a foundation for municipalities to manage and regulate this sector, ensuring positive contributions to local economies and community well-being.

Keywords: Short-term rentals, sharing economy, housing market, tourism.

This project was sponsored by a grant from the Center for Rural Pennsylvania, a legislative agency of the Pennsylvania General Assembly. The Center for Rural Pennsylvania is a bipartisan, bicameral legislative agency that serves as a resource for rural policy within the Pennsylvania General Assembly. It was created in 1987 under Act 16, the Rural Revitalization Act, to promote and sustain the vitality of Pennsylvania's rural and small communities. Information contained in this report does not necessarily reflect the views of individual board members or the Center for Rural Pennsylvania. For more information, contact the Center for Rural Pennsylvania, 625 Forster St., Room 902, Harrisburg, PA 17120, (717) 787-9555, www.rural.pa.gov.

Executive Summary

Introduction

The short-term rental (STR) market in Pennsylvania has experienced significant growth over the past decade, evolving from a niche offering into a widespread industry with substantial economic and social impacts. This project provides a statewide inventory of STRs using 2023 data from AirDNA and maps STR locations in a Geographic Information System (GIS). AirDNA is a proprietary web service that estimates a 95% accuracy rate for all aggregated short-term rentals listed on Airbnb, HomeAway, and Vrbo.

The statewide inventory includes thousands of STRs that vary greatly by price, number of rooms, types of accommodations, and seasonality. In addition, 20 municipalities in the state were selected to examine the inventory and the characteristics of STRs in various localities. The sampled municipalities vary in population, location throughout the state, location within urban and rural counties, and types of tourism amenities. The AirDNA data include information on types of occupancy units, housing characteristics, number of rooms rented, number of allowed guests, and occupancy rates. A detailed evaluation is provided for the 20 municipalities that includes 12 months of revenue, average nightly rate, number of bookings, maximum number of guests, and cleaning fees.

Growth of Short-Term Rentals in Pennsylvania

The STR market in Pennsylvania began its expansion in 2008 with the creation of a few properties, including a luxury apartment near Kane and a shared room in the original Airbnb style. By 2009, 32 additional STRs were established, though only a few reported revenues. The market gradually gained momentum, with 149 new listings in 2011, 349 in 2012, and a notable increase to 851 in 2013. This steady growth reflected the rising popularity of STRs as an alternative to traditional accommodations, particularly in tourist-friendly areas such as Gettysburg and Hershey.

The period between 2014 and 2016 marked a significant surge in STR listings, with thousands of new properties appearing across the state. These years saw an expansion not only in the number of listings but also in the variety of accommodations available, from traditional houses and apartments to unique offerings like yurts, treehouses, and houseboats. By 2016, STRs were present in all 67 counties, with revenue figures continuing to climb, particularly in the Poconos, Laurel Highlands, and in the vicinity of The Pennsylvania State University in Centre County.

The growth trend persisted into the years 2017-2019; in 2018, the top-performing STR produced over \$1 million in revenues. The COVID-19 pandemic in 2020 caused a temporary dip in new STR listings and fluctuating revenue, but the market rebounded by 2021 and 2022. The resurgence was driven by the return of in-person events and a growing preference for socially distanced, outdoor-friendly accommodations.

The State of the STR Market in 2023

In 2023, Pennsylvania's STR market reached a milestone with 53,810 active listings spanning all 67 counties and 1,960 municipalities. This widespread presence highlights

the market's activity in both urban and rural areas. Philadelphia, with 14,007 listings, emerged as the leading county, followed by Monroe County (6,885), and Allegheny County (5,189). The distribution of STRs demonstrated a balance between urban centers such as Philadelphia, Pittsburgh, and Harrisburg, and rural vacation destinations, particularly in the Poconos.

The range of property types within the STR market was diverse, with houses (44%), apartments (26%), cabins (6%), and townhouses (6%) being the most common. Additionally, the market included unique accommodations like chalets, farm stays, and tiny houses, along with more unconventional options such as buses, nature lodges, yurts, and even castles. This diversity reflects the state's varied tourism appeal, catering to different needs and preferences.

Financially, the STR market in Pennsylvania generated total revenues surpassing \$856 million in 2023. However, the distribution of revenue among listings was uneven, with the average STR earning \$16,125 annually, while the median income was significantly lower at \$5,642. The average daily rate (ADR) for STRs statewide was \$175, with some as high as \$3,220, indicating the wide range of offerings available. The occupancy rate averaged 35 percent, suggesting that most STRs were booked about one-third of the time, with an average of 22.4 bookings per listing.

Analysis of Selected Municipalities

To provide a deeper understanding of the STR market's impact, this project analyzed 20 municipalities across Pennsylvania, offering insights into the housing, economics, and tourism dynamics in both urban and rural settings. Urban areas such as Harrisburg, Erie, and Allentown saw substantial growth in STR numbers, driven by their diverse economic bases, historical significance, and vibrant local economies. These cities capitalized on their assets to attract a considerable volume of STRs, with higher ADRs and occupancy rates than many rural areas.

In contrast, municipalities in rural counties, like Gettysburg, Jim Thorpe, and State College, also experienced growth in STRs, largely due to tourism centered around historical sites, natural beauty, and local colleges. However, the economic impact of STRs in these areas varied, with municipalities in rural counties generating lower total aggregate revenue compared to urban counterparts. For instance, municipalities like Derry and New Hope, along with their surrounding areas, exhibited significantly higher ADRs than rural areas like Kane, Wellsboro, and Brookville, which had lower ADRs. Still, per unit, some rural STRs have as many bookings as units in urban counties and can bring in revenues just as high; the lowest mean/median revenues for 2023 in the 20 selected municipalities are observed in urban Allentown, Harrisburg, and Scranton.

Occupancy rates and the number of bookings also varied significantly between urban and rural STRs. Urban areas generally saw higher occupancy rates and more bookings, driven by constant demand from both business travelers and tourists. Rural STRs, while seeing growth, often experienced more seasonal fluctuations in occupancy, influenced by local events and tourist seasons. For example, Derry, New Hope, and Harrisburg showed higher average occupancy rates compared to rural areas like Huntingdon, Stroudsburg, and Hawley.

Conclusion

This study provides a comprehensive inventory and analysis of the STR market in Pennsylvania, offering valuable insights into its growth, distribution, and impact on both urban and rural areas. The findings highlight the significant economic contributions of STRs to the state, as well as the disparities between urban and rural markets in terms of revenue, ADRs, and occupancy rates. The research also underscores the importance of considering local regulations and policies to manage the growth of STRs effectively while balancing the needs of residents and tourists.

As the STR market continues to evolve, municipalities across Pennsylvania must consider how best to leverage this growing sector to enhance tourism, economic development, and community well-being. By implementing well-informed policies and emphasizing responsible tourism management, municipalities can ensure that STRs contribute positively to their local economies while preserving their unique character and resources. This study serves as a foundation for future discussions on STR regulations and their role in shaping the future of Pennsylvania's tourism and housing markets.

Introduction

Short-term rentals (STRs) are homes, apartments, spare rooms, and even camping sites offered for a shorter period of time than normal rental agreements. They have grown worldwide since the establishment of Airbnb in 2008 (Furukawa and Onuki, 2022). STRs vary by geography and are influenced by the physical environment, social, economic, and jurisdiction factors. Some areas see STRs as an opportunity to increase tourism, employment opportunities, and economic development, while others raise concern over strain on public services, reduction of affordable housing, noise, or unsafe practices.

As the growth of STRs is predicted to continue and the positive and negative aspects receive attention, regulations could be considered by state and local planners. Although there is an emerging literature on STRs, most studies focus on large cities that attract tourists worldwide. Only a few studies, such as DiNatale, Lewis, and Parker (2018) and Shelton (2023) examine STRs in small cities. This study addresses the gap in the literature by selecting a range of sizes, location, and types of municipalities in Pennsylvania. It records and maps the number of STRs, their revenue, characteristics, housing, and tourism implications in both rural and urban areas in the Commonwealth. Research on STRs is crucial due to their potential impact on both large urban cities and the rural countryside. The dynamics of STRs on local communities, housing markets, and tourism can inform policy decisions at the municipal level.

History and Growth of STRs

Traditional economies where goods and services are primarily owned, marketed, and sold by companies, have been impacted over the past two decades with an alternative model shared by a community with a collaborative, cost-effective approach known as the "sharing economy" (Schor and Attwood-Charles, 2017). The sharing economy is an economic model based on the idea of shared goods, services, and resources where individuals engage in peer-to-peer interactions, for a fee, on an online platform.

Companies such as Airbnb, Uber, Lyft, and TaskRabbit are common household names, however more unique niche markets are gaining usage. GetMyBoat connects boat owners with daily recreationalists; Peerby allows neighbors to share and borrow items promoting a sense of community; Swimply arranges private pool bookings; Spinlister organizes a bike-sharing platform; and Eatwith connects travelers to locals though immersive dining experiences. The sharing economy has exploded in recent years and is estimated to reach over \$335 billion in earnings by 2025 (do Nascimento and Mazali, 2023).

Sharing is as old as humankind, but the sharing economy requires a platform, and thus over the past few decades the internet has contributed to the success of this business model (Simic and Liem, 2023). The sharing economy is fueled by three elements: underused resources, peer-to-peer engagement, and network efficiency. The average car, for example, spends most of its life parked, so by participating in the sharing economy, users can either gain additional income by renting it out during unused times. Additionally, the sharing economy has social and psychological benefits where users report a more authentic experience, personal growth, sense of community, and

confirmation of trust, more so than traditional economic methods that connect people via a transaction to corporations.

STRs are a major player in the sharing economy and have also grown rapidly. Airbnb was started by three young students who rented out air mattresses in their loft to help pay rent (Aydin, 2019). The idea developed into a start-up company in 2008 and grew to an estimated \$30 billion company by 2020, with over three million listings in 190 countries (Nieuwland and van Melik, 2020). The growth of Airbnb was even greater the following year, reaching over seven million listings and an estimated value of \$124 billion in 2021 (Simic and Liem, 2023).

Today the range and styles of STRs is vast, and each city defines these accommodations in their own language, but they are generally categorized into the following three groups: 1) Primary hosted STRs operated in the primary residence where the host is at home with the guest and usually only part of the home is offered to the guest (including Airbnb); 2) Primary un-hosted STRs where the entire primary residence is rented to the guest, and the host is absent; and 3) Nonprimary STRs where entire properties are rented, the units are not the primary residences of each host, and the host is absent (typically, the rental of a second home for commercial purposes) (Furukawa and Onuki, 2022).

The three distinct categories demonstrate how this sharing economy can range from the initial idea of sharing an extra bedroom to generate additional income to a potentially big business opportunity where investors target properties with the sole intent to purchase and list a property as an STR. Some STR hosts have taken this model to a professional level, often resulting in gentrification and increased housing costs (Simic and Liem, 2023).

STRs seem to be a preferred option for many travelers. Vacationers are often looking for something different than a traditional hotel, and the departure from this model is more noticeable in vacation destinations where people would rather stay in a larger, more affordable single-family home than a more expensive hotel (Gottlieb, 2013). Consumers report that they find STRs a more authentic experience and to be a more economical and sustainable mode of consumption than a traditional hotel (Furukawa and Onuki, 2022). Guests love the local experience, tend to stay longer, and often become repeat visitors, mid-term renters, or eventually permanent residents. In many cities, this indicates visitors are moving away from the central tourist districts to stay in single family homes that are usually located in residential neighborhoods (Nieuwland and van Melik, 2020).

The COVID-19 pandemic affected all aspects of life, including work, travel, consumption patterns, and of course, public health. As people emerged from an imposed lockdown, people looked for less-crowded, open spaces, and many of those who could work remotely left the urban environment for more rural areas. STRs filled these housing needs as tourists tended to travel to more remote destinations and rent private apartments and homes to ensure social distances (Zeng et al, 2022). "Attractive" areas with mountains, national parks, state parks, coastal areas, and rural areas saw an influx of tourists and remote workers. In areas where the housing markets have declined over the decades, some saw this influx as a perceived lifeline (Colomb and Gallent, 2022).

Finally, changes in workforce demands and technology also contributed to the success and growth of STRs. A new type of worker emerged called "digital nomads," who could work online (Cook, 2023), taking advantage of short- and medium-term rentals (Colomb and Gallent, 2022). Many jobs have remained completely or partially online, allowing workers flexibility and the range of STRs provided housing and lifestyle options that would not be possible with traditional hotels.

Methods

The goal of this research is to inventory STRs in the Commonwealth and examine the location, revenue, and characteristics in both urban and rural areas of Pennsylvania.

The size of the inventory is measured with data from AirDNA, a proprietary web service that estimates a 95% accuracy rate of all aggregated short-term rentals listed on Airbnb, HomeAway, and Vrbo. AirDNA data are mapped in a Geographic Information System (GIS).

The statewide inventory includes thousands of STRs that vary greatly by price, number of rooms, types of accommodations, and seasonality. In addition to statewide patterns, 20 municipalities were selected to further understand the characteristics of STRs in various localities. The sample of municipalities vary in population, location throughout the state, location within urban and rural counties, and types of tourism amenities. The AirDNA data provides information on types of occupancy unit, number of rooms rented, number of allowed guests, occupancy rates, and their characteristics. A detailed evaluation examines the 20 municipalities for 2023 that included twelve months of revenue, average nightly rate, number of bookings, maximum number of guests, and cleaning fees. Table 1 lists the municipalities, their urban versus rural county status, population estimates for 2023 (U.S. Census Bureau, 2023), number of active STRs in 2023, and brief details about each specific location.

Table 1: Selected Pennsylvania Municipalities and Active Short-Term Rentals

	Municipality	Rural/ Urban	Population in 2023	Active STRs in 2023	Justification
1	Allentown	Urban	124,880	A vibrant community with historic appeal and recent economic revitalization.	
2	Brookville	Rural	3,974	15	Close to Cook Forest State Park and Punxsutawney Phil with plenty of outdoor recreation.
3	Derry	Urban	13,422	292	Known for its unincorporated community of Hershey, its medical facilities, and chocolate-related tourism.
4	Edinboro	Urban	5,821	32	Known as a small college town with an active watersports and summer tourism.
5	Erie	Urban	92,957	338	Located on the shores of Lake Erie with waterfront and recreational opportunities.
6	Gettysburg	Rural	8,468	106	Known for its historical significance related to the Civil War and strong tourism focus.
7	Harrisburg	Urban	50,012	501	State capital with a mix of government, business, and tourism sectors.
8	Hawley	Rural	1,229	22	Located near Lake Wallenpaupack, a popular recreation area in the Poconos.
9	Huntingdon	Rural	6,898	12	Known for access to outdoor recreation and historical importance with the railroad.
10	Jim Thorpe	Rural	4,537	139	Known for its Victorian architecture, outdoor activities, and recreational opportunities near the Pocono Mountains.
11	Kane	Rural	3,456	23	Located near Allegheny National Forest with many outdoor recreational opportunities.
12	Lancaster	Urban	57,153	389	Known for its agriculture, tourism, and Amish culture.
13	Ligonier	Urban	1,481	96	Known for its French or British settlement and colonial history, and as an access point to outdoor activities.

14	New Hope	Urban	2,624	60	Scenic small town along the Delaware River, equidistant from New York City and Philadelphia, with unique shopping, restaurants, and cultural attractions.
15	Scranton	Urban	75,805	155	Known for its historical significance and its importance to the coal industry
16	State College	Rural	40,495	398	Home to Penn State University, a large student population and sporting and entertainment events
17	Stroudsburg	Rural	5,832	41	Located near the Pocono Mountains with a revitalized small downtown and surrounding recreational opportunities
18	Wellsboro	Rural	3,469	22	Located near Pine Creek Gorge with many outdoor recreational opportunities
19	West Chester	Urban	19,000	41	A vibrant small downtown, a college town, with strong historical appeal but still close to suburban Philadelphia
20	Williamsport	Rural	27,470	93	Known for its unique sporting events, particularly the annual Little League World Series

Characteristics such as property type, number of bedrooms, and listing title are examined as part of this study to determine if unique features contribute to tourism. The inventory of accommodation types provides insights into STRs and their competition with long-term rentals, changes in the affordability of housing, impacts on tourism, and attractiveness to different types of visitors, which could result in the need for different regulations in distinct locations.

Results

Statewide Short-Term Rental Inventory

A GIS was used to map time series data. The data set purchased from AirDNA provide the date the STR was created and thus it is possible to map the growth and distribution across the state. Figure 1 and the following time series discussion focuses solely on the number of STRs created in that year, not the total number operating in the state, or the longevity of each STR. For example, many STRs were created but never generated revenue and eventually closed, while others were specifically created for a short duration or event and again closed. The maps and inventory provide insights into STR patterns of growth, locations, characteristics, and economics.

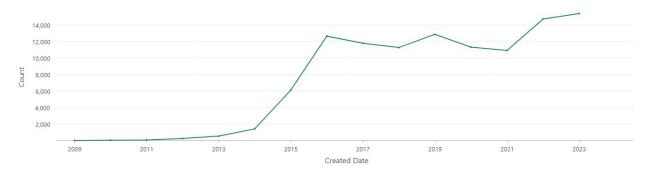

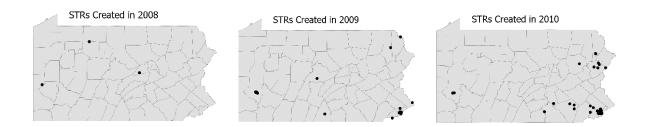

Figure 1: Pennsylvania Short-Term Rentals by Year Created, July 2008 to March 2024

Statewide Trends

The first STR in the Commonwealth was created on July 1, 2008, as a luxury apartment near Kane (McKean County) and was quickly followed by one each in Ambridge (Beaver County) and Millmont (Union County). One of the three STRs was in the true spirit of the foundation of Airbnb with a shared room, while the other two were private, and one called "PSU Cabin" targeted specific events in State College (Centre County).

In 2009, 32 STRs were created. Most did not have any visitors, and only five reported revenues that ranged from \$246 to \$23,556. The revenue is the amount earned, including the advertised price at the time of booking and any cleaning fees, that the homeowner would receive. The largest grossing revenue was from a luxury apartment in Philadelphia. The STRs embraced the tourism aspects with listing titles that included "PSU Football," "Book Lovers Cozy Victorian Retreat," and "Art Museum Garden." Most of the STRs were apartments or houses, but two were houseboats. The next year, 2010, 44 STRs were created and seven reported revenues that ranged from \$391 to \$49,761, with the largest grossing revenue generated from a property entitled "Poconos Log Cabin Gateway."

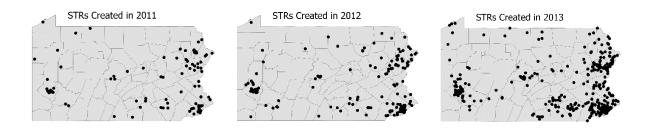

Figure 2: Location of STRs Created in 2008, 2009, and 2010 in Pennsylvania

The next few years saw a steady growth in the number of STRs throughout the Commonwealth. In 2011, 149 STRs were created. Fourteen percent (N=21) reported revenues that ranged from \$380 to \$34,521, with the largest revenue generated from an STR entitled "Historic Civil War Farmhouse" near Gettysburg. In 2012, 349 STRs were created and 17 percent (N=61) reported revenues. Revenues ranged from \$248 to \$117,146, with the largest generated from an STR located near Hershey. In 2013, 851 STRs were created, and 11 percent (N=94) reported revenues that ranged from \$111 to \$82,923, with the largest revenue-generating rental located near Philadelphia.

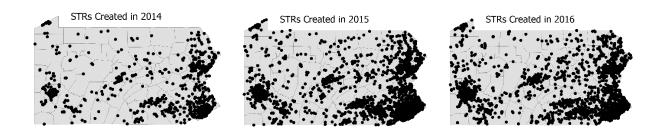

The STRs created in 2011, 2012, and 2013 certainly built on those located in surrounding Philadelphia and Pittsburgh but also contributed to the development of clusters in the northeast and south-central part of the state. The northwestern part of the state was also seeing more STRs emerge. The titles of these listings featured the natural resources and abundant tourism opportunities, such as "All Seasons Get Away", "Unique Retreat", "Stay in a Cave" or "Cozy Cabin Rails to Trails". Several STRs had names such as "Large Spacious Room for Papal Visit" and "5-8 minutes from Pope Visit locations," which suggest that the STRs were created to accommodate crowds for specific events.

Figure 3: Location of STRs Created in 2011, 2012, and 2013 in Pennsylvania

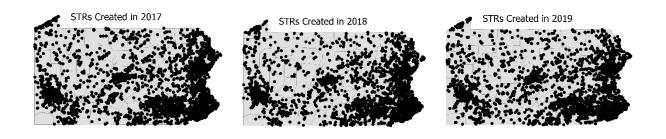

Over the next several years, the growth and distribution spread throughout the state. In 2014, 2,689 STRs in 60 counties were created, and in 2015, 13,399 were created; at this time, only Cameron, Greene, and McKean counties did not have an STR within their county boundaries. By 2016, 7,693 were created and STRs were found in every county. Many of the new listings created in 2014, 2015, and 2016 revealed a trend of unique property types including yurts, treehouses, trains, caves, nature lodges, earthen houses, barns, boats, campers, and tents. In 2014, 10 percent (N=258) of the newly created STRs reported revenues that ranged from \$120 to \$202,347. In 2015, 4 percent (N=592) reported revenues that ranged from \$40 to \$410,866. In 2016, 9 percent (N=702) reported revenues that ranged from \$60 to \$318,428. Of the top STRs that generated revenue in 2014, 2015, and 2016, most were in the Poconos, Lural Highlands, and Penn State regions.

Figure 4: Location of STRs Created in 2014, 2015, and 2016 in Pennsylvania

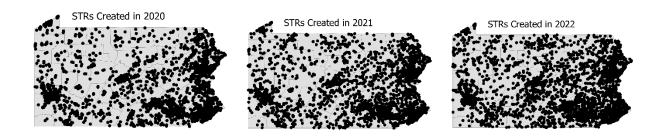

The next three years saw the number of STRs and their revenue skyrocket with twelve to thirteen thousand created each year from 2017 through 2019. In 2017, the highest revenues reported were just short of half a million dollars (\$496,800) from "Your Weekend Escape" located near State College, and the second through fourth highest were close behind, earning over \$400 thousand each and all located in the Poconos. In 2018, an STR generated over a million dollars (\$1,076,953) from a listing entitled "Largest VRBO in the World" that advertised itself as located near the New York border and near Beach Lake. In 2019, the highest revenues were reported in Monroe County and near Philadelphia, while another three of the top ten highest revenue producers were located near State College.

Figure 5: Location of STRs Created in 2017, 2018, and 2019 in Pennsylvania

The number of STRs created, and revenue reported, in 2020, 2021, and 2022, directly reflected the COVID-19 pandemic that at first restricted travel and later encouraged people to socially distance and engage in safe, outdoor activities. In 2020, only 9,498 STRs were created and 29 percent (N=2,760), reported revenues of \$30 to \$307,360, with seven of the top ten revenues generated from properties located in the Poconos. In 2021 and 2022, the number of STRs created rebounded with 12,614 and 15,902, respectively. In 2021, 43 percent (N=5,495) generated revenues that ranged from \$45 to \$458,506, and in 2022, 64 percent (N=10,148) generated revenues that ranged from \$15 to \$427,678. The lower end of revenues came from tents and yurts whereas five of the top ten revues reported came from resumed in-person events at State College.

Figure 6: Location of STRs Created in 2020, 2021, and 2022 in Pennsylvania

Short-Term Rental Location and Characteristics in 2023

The most current comprehensive inventory of all active STRs in Pennsylvania is based on the last complete data year: 2023. A total of 53,810 STRs operated in all 67 counties (listed per county in Table 2) across 1,960 municipalities with 611 municipalities across the state having none (see Appendix 1 for a list of the 611, and Appendix 2 for a map). The top five counties with the most STRs included both rural and urban designations. Philadelphia, an urban county, had the largest concentration of STRs with a total of 14,007. With less than half that number, rural Monroe County had the second largest count with 6,885 STRs. Third largest was another urban county, Allegheny County with 5,189 STRs, followed by two more rural counties, Centre and Carbon with 2,246 and 2,139 STRs, respectively. Based on Figure 7, it is clear that the rural counties ranking among those with the highest numbers of STRs are in the Poconos area and Centre County. Allegheny County, where Pittsburgh is located, and the urban southeastern part of the state also have high concentrations.

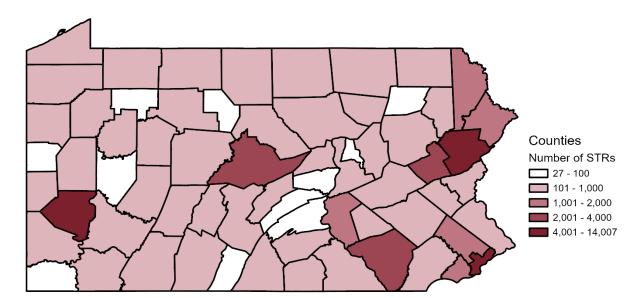

Figure 7: Short-Term Rentals by Pennsylvania County, Operating in 2023

At the municipal level, locations with the largest numbers of STRs are found in both urban and rural counties. Among the top ten, Philadelphia (14,007), Pittsburgh (3,897), and Harrisburg (501) (all urban) ranked first, second, and ninth. The remaining seven of the top ten municipalities were rural, located in the Poconos and included Coolbaugh (2,043), Tobyhanna (1,288), Kidder (1,096), Penn Forest (769), Smithfield (575), Jackson (565), and Tunkhannock (501).¹

www.rural.pa.gov Page 17

_

¹ Coolbaugh (2,043), Tobyhanna (1,288), Smithfield (575), and Tunkhannock (501) are in Monroe County; Kidder (1,096), Penn Forest (769), are in Carbon County; Jackson (565) is in Columbia County.

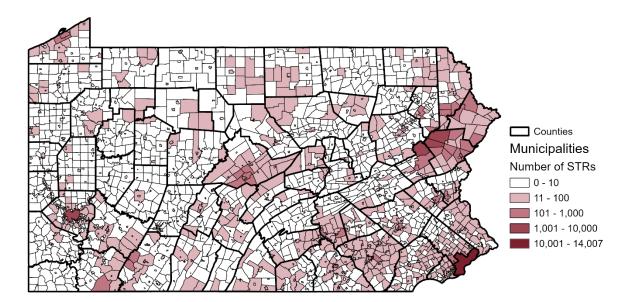

Figure 8: Short-Term Rentals, by Pennsylvania Municipality, Operating in 2023

In 2023, the most common property types were houses (23,494), followed by apartments (13,735), then cabins and townhouses (about 3,000 each) but many chalets, farm stays, and tiny houses were common, along with 1,657 unique types that included buses, nature lodges, yurts, castles, house boats, tree house, tipis, islands, shipping containers, shepherd huts, light houses, and ryokan. While the majority had parking, 25 percent (13,817) did not.

Seventy-eight percent of the active STRs in 2023 were rentals of an entire property, while twenty-one percent rented private rooms, with only a few listed as shared rooms (220) or hotel rooms (137). The typical number of bedrooms was two, the average number of bathrooms was 1.6, and guests ranged from 1 to 100 with a mean of 5.5 and median of four guests per STR.

The total revenue generated by all STRs in 2023 was \$856,694,830 and the mean STR generated \$16,125 per year with the median STR at \$5,642. The average daily rate (ADR) is calculated by the total revenue generated, including cleaning fees, divided by the number of nights booked. Statewide the ADR ranged from \$0 to \$3,220 with a mean of \$175 and a median of \$134.

Individual listings are categorized into one of five price tiers, defined by the performance of the listing's average daily rate over the last 12 months available. AirDNA examines the entire state's STR market and divides all the listings into five groups: budget, economy, mid-scale, upscale, and luxury. Ideally each price tier segment has roughly an equal number of listings. In 2023, Pennsylvania had roughly equal percentages across all five tiers. ². This relatively equal division will allow for later comparisons of local municipalities and determine if particular areas cater to a particular price segment of the market.

-

² Budget 18.8% (N=10,151); economy 18% (N=9699); mid-scale 17.4% (N=9,379); upscale 17.3% (N=9,285); and luxury 17.6% (9,446).

Overall, 77 percent (41,589) reported revenue that ranged from \$5 to \$1,076,953. The top three largest revenues reported in 2023 were from STRs located in Beach Lake (\$1,076,953), State College (\$496,806), East Stroudsburg (\$475,031). Despite these large revenues, less than two percent (898) generated revenue over \$100,000, and 59 percent (31,513) generated between \$1 and \$10,000 in 2023.

The availability, or number of days that an owner listed their property, and the number of separate bookings and occupancy rate that an STR received is important to analyze usage and visitor impact. The availability of all 53,810 STRs ranged from 0 to 360 days with a mean of 74.1 and a median of 55, demonstrating that most listings hare not available year-round for visitors. The number of days a listing was booked ranged from 0 to 324 with a mean of 65.1 with a median of 36 days. The mean occupancy rate was 35% and a median of 33%, for the entire 12 months of 2023, and therefore, most listings were booked about one-third of the time. Additionally, owners can block days that the STR is available, and those ranged from 0 to 360 with a mean of 110 and median of 53 days, and in fact, 10.5 percent (5,627) were blocked off the entire year. ³Each booking resulted in guest turnover, and many charge a cleaning fee. The total number of bookings ranged from 0 to 225, with the mean of 22.4 and a median of 10 bookings per unit. The cleaning fees ranged from \$0 to \$1,800, with the mean cost of \$87.70 and median of \$65 and a sum of \$4,246,344.

Short-Term Rentals at the Municipal Level

Twenty municipalities were further examined and inventoried to gather an in-depth analysis of the characteristics of STRs in Pennsylvania. Philadelphia and Pittsburgh are the two largest urban centers in the state, with the two highest numbers of STRs in 2023, at 14,007 and 3,897 STRs, respectively. Philadelphia is the state's largest urban area with business, tourism, and diverse neighborhoods, and Pittsburgh is the second largest city, with unique urban appeal, business, and tourism sectors. The size, population, housing characteristics, and tourism attributes of those cities are significantly different than the rest of the Commonwealth and thus are not included in this part of the study.

The sampled municipalities were selected because of the variations in population, location throughout the state, location within urban and rural counties, and types of tourism amenities. Ten municipalities are in urban counties and ten are in rural counties.

www.rural.pa.gov Page 19

_

³ One reason a property might be blacked off for a year could be for extensive renovations, particularly when a property changes ownership. Limits on the days a property is available for rental may also be set by a Homeowners Association, which is common in Florida.

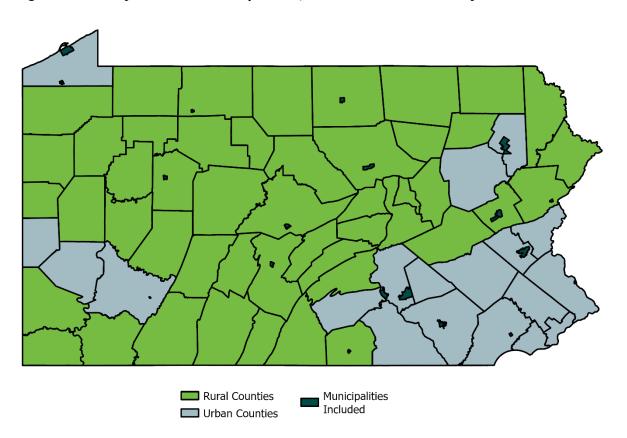

Figure 9: Twenty Selected Municipalities, Rural and Urban Pennsylvania Counties

Selected information for each of the 20 municipalities was purchased from AirDNA to examine not only numbers, but characteristics and types of lodging. Table 3 shows the overall number of short-term rentals by location, and the years they were created. The state has seen notable growth in several Pennsylvania municipalities since their introduction. While some municipalities, such as Harrisburg, Lancaster, and State College have large numbers within the municipality proper, other municipalities such as Stroudsburg and Hawley have an even larger number in the surrounding 5-mile vicinity, reflecting their appeal as regional tourist destinations.

Table 3: Short-Term Rentals, Selected Pennsylvania Municipalities

Municipality	Year of		# 1	New STRs	2023 Total Active STRs

Source: AirDNA. Data compiled for selected Pennsylvania municipalities.

The types of rentals, prices, and management structure are included in Table 4 and these characteristics reveal distinct trends across municipalities. Luxury STRs dominate in areas like Derry Township (57.5%) and New Hope (91.6%), indicating these regions cater to high-end clientele, likely tied to affluent demographics or nearby attractions. In contrast, budget-friendly options are prevalent in urban centers such as Allentown (29.7%), Erie (34.6%), and Harrisburg (35%), reflecting demand for affordable lodging. STRs are overwhelmingly managed independently, though areas like Harrisburg (99 company-managed units) and Lancaster (33) suggest growing professionalization in some markets. Unique markets such as Williamsport stand out for focusing on upscale rentals (32.3%), potentially tied to local cultural or economic features. Additionally, larger cities like Harrisburg and Erie have significant apartment-based STRs, while rural areas such as Huntingdon and Kane primarily offer homes, reflecting differences in housing stock across urban and rural environments.

Table 4: Characteristics of Short-Term Rentals in Pennsylvania Municipalities, 2023

Housing Type Municipality		Price	e Tier	Management		
Municipality	Homes	Apartments	Largest Tier	Percentage	Independent	Company Managed
Allentown	86	98	Budget	29.7%	216	6
Brookville	10	0	Midscale	40.0%	15	0

West Chester	15	15	Luxury	40.0%	41	0
Williamsport	32	29	Upscale	32.3%	63	30

Source: AirDNA. Data compiled for selected Pennsylvania municipalities.

Also of key interest to locations is the amount of revenue generated by short-term accommodations. Table 5 shows the revenues by municipality. Overall, the average total STR revenues for municipalities in an urban county is \$3.1 million; rentals for municipalities in rural areas generate a million less on average - close to \$2 million (\$1.96). Per unit however, any rural/urban difference disappears; the highest mean or median revenues are generated by municipal STRs in both rural and urban counties alike, and the lowest mean/median revenues are in urban Allentown, Harrisburg and Scranton.

The other source of financial benefit that is measurable with data available are the cleaning fees generated by STRs. The average fees across all 20 municipalities range from a low of \$31 in Brookville to \$132 in Derry Township. While there is some suggestion that these fees are lower in municipalities in rural counties (4 of the lowest 5 are rural), for the remainder there is not a distinct rural/urban pattern. The correlation between average fees and average revenues is modest, at .5; as one would expect, the total revenue generated overall from rent and fees is strongly related (at .93).

Table 5: Revenue and Fees Generated by Short-Term Rentals, 2023

		Re	venue		Cleaning Fees			
Municipality	Max (Min 0)	Mean		Total	Max (Min 0)	Mean	Median	Total
Allentown	\$280,571	\$8,358	\$3,181	\$1,821,971	\$275	\$56	\$50	\$10,234

Source: AirDNA. Data compiled for selected Pennsylvania municipalities.

The impact on a community also depends on the frequency with which properties are rented. Table 6 offers a snapshot of just how many bookings occur in each of the 20 municipalities. The municipalities of Gettysburg and New Hope show the highest number of average rental days (52), indicating strong demand, likely driven by tourism. Because of the larger number of rental units available, larger cities in urban counties such as Harrisburg and Lancaster have the highest total rental days in the aggregate (12,124 and 12,409) despite lower average days of rental per unit. This variability impacts communities differently; areas with high rental activity may experience economic benefits from tourism but could face challenges such as housing shortages or changes to neighborhood dynamics due to transient populations. Not surprisingly, the average number of bookings is higher for municipalities in more densely populated urban counties (just over 5,600) while the number is less than half that for those in rural counties (approximately 2,400). Still, units in rural counties rent out for an average of five more days per year than units in urban counties (33 versus 28 days).

Table 6: Bookings and Occupancy Rates of Short-Term Rentals, 2023

Municipality		Воо	kings		Occupancy Rates (out of 1)		
	Max (Min 0)	Mean	Median	Total	Mean	Median

Source: AirDNA. Data compiled for selected Pennsylvania municipalities. Occupancy rate is measured as the total number of days booked as a percentage of days that a property is *available* for rental.

The number of guests staying in a rental and the capacity of a property is another indicator of the impact their stay may have on the community, whether positive (indirect income generated at restaurants, retail establishments, etc.) or negative (noise, water usage, parking needs, etc.). Table 7 shows that municipalities vary significantly in guest capacity and bedroom availability. Average guest capacity ranges from 1.5 in New Hope to 6.9 in Derry Township, with most municipalities accommodating 4-6 guests on average. Similarly, the average number of bedrooms spans from 1.4 in Harrisburg to 3.0 in Edinboro and Hawley, reflecting a mix of smaller urban units and larger rural properties catering to family or group stays. These variations highlight the diversity in STR offerings, tailored to regional demand and housing stock. Appendix 3 lists the data in order of guests allowed; as expected, the number of bedrooms is related to number of guests allowed. Of the six municipalities with smallest guest capacity, five of those are in urban counties.

Table 7: Guest Capacity of Short-Term Rentals, 2023

Source: AirDNA. Data compiled for selected Pennsylvania municipalities.

To better visualize the relative impact of short-term rentals in a community, graphics map the rentals in each municipality, summarize key data, and provide an insert showing rentals within a 5-mile radius. The figures include data on the average daily rates charged by STR in both the municipality and surrounding area. Figures 9-14 provide examples of some municipalities; the remainder of the twenty are in are in Appendix 4. The amount that visitors were willing to pay for a nightly stay varied by location.

Six of the urban STRs were below the state's ADR, and two were just slightly above. Derry and New Hope, along with the municipalities surrounding them, had significantly higher than average ADRs. By contrast, three of the municipalities in rural counties, Kane, Wellsboro, and Brookville and their surrounding municipalities, had lower than average ADRs, while three, Williamsport, Huntingdon, and Stroudsburg had lower than average ADRs but were surrounded by municipalities that had significantly higher than average ADRs. Four municipalities in rural counties, Jim Thorpe, Gettysburg, State College, and Hawley, and their surrounding municipalities, had significantly higher ADRs reflecting the importance of niche appeal, affiliations with large events and educational institutions, and tourist attractions.

Discussion

This project looks at the distribution of STRs over time, with a further examination of 20 sampled municipalities to provide a solid inventory and to provide further insights into the types of housing and revenues generated in communities located in both urban and rural counties of Pennsylvania.

The growth of STRs in Pennsylvania began modestly in 2008 with the creation of three properties, including a luxury apartment near Kane, PA, and a shared room following the original Airbnb concept. By 2009, 32 additional STRs were established, although only a few reported revenues, with the highest coming from a luxury apartment in Philadelphia. Over the next few years, the number of STRs steadily increased, with 149 created in 2011 and 349 in 2012. The trend continued into 2013, when 851 STRs were added. Revenue growth varied, with the highest earners often located near popular tourist destinations such as Gettysburg and Hershey. STR listings during this period highlighted unique attractions and events, from "Poconos Log Cabin Gateway" to "Historic Civil War Farmhouse," reflecting a growing emphasis on the state's rich tourism opportunities.

The expansion of STRs surged between 2014 and 2016, with thousands of new listings spreading across Pennsylvania, including unique properties like yurts, treehouses, and houseboats. By 2016, STRs were present in every county, and revenue figures continued to climb, with top earners found primarily in the Poconos, Laurel Highlands, and near The Pennsylvania State University. The upward trend continued into 2017–2019, marked by significant revenue increases, with the highest revenue in 2018 exceeding one million dollars. The impact of the COVID-19 pandemic was evident in 2020, when the number of new STRs dipped, and revenues fluctuated. However, the market rebounded by 2021 and 2022, driven by a resurgence of in-person events and a preference for socially distanced, outdoor-friendly accommodations.

In 2023, Pennsylvania's STR market experienced significant growth, with 53,810 active listings across all 67 counties and 1,960 municipalities, demonstrating the widespread popularity of STRs throughout the state. The distribution of STRs varied between urban and rural areas, with Philadelphia leading with 14,007 listings, followed by Monroe County (6,885), Allegheny County (5,189), and other rural counties such as Centre and Carbon. Notably, STRs were concentrated in both major urban centers like Philadelphia, Pittsburgh, and Harrisburg, as well as popular rural vacation destinations, particularly in the Poconos. The range of property types was diverse, with houses, apartments, and cabins being the most common, but also featuring unique accommodations like yurts, houseboats, and even castles, reflecting the state's varied tourism appeal.

In terms of financial performance, the total revenue generated by STRs in Pennsylvania in 2023 was an impressive \$856.7 million, with the average STR earning \$16,125 annually. However, revenue distribution was uneven, with a median income of \$5,642 and less than 2% of STRs earning over \$100,000. The average daily rate (ADR) for STRs statewide was \$175, though it ranged from \$0 to \$3,220, highlighting the diversity in price points. The occupancy rate, which averaged 35%, suggested that most STRs were booked about one-third of the time, with an average of 22.4 bookings per listing. Additionally, cleaning fees added to the revenue, averaging \$87.70 per booking. Despite the high revenues reported by a few top-performing STRs, such as those near State College and Beach Lake, many listings earned more modest returns, indicating a broad but varied market across the state.

Further analysis of the 20 surveyed municipalities revealed a dynamic landscape for STRs across Pennsylvania. Overall, there was a significant increase in the number of active STRs from 2015 to 2023. Urban areas like Harrisburg, Erie, Lancaster, and Allentown saw experienced steady growth in STR activity starting as early as 2011, with a consistent increase in both new and total active rentals. This reflects a more established market driven by high population density and continuous demand from business and leisure travelers.

In contrast, municipalities in rural counties such as Gettysburg, Jim Thorpe, and State College also experienced growth, likely influenced by tourism centered around historical sites, natural beauty, and local colleges. Additionally, rural areas such as Brookville, Hawley, and Huntingdon saw later and slower growth, with fewer new STRs added annually, indicating a more niche or outdoor recreational tourism. This divergence

suggests that urban markets benefit from broader, year-round demand, while rural markets may rely on episodic surges tied to local events or natural attractions.

Occupancy rates appear to vary between urban and rural STRs. Short-term rentals in urban counties generally had higher occupancy rates, driven by more constant demand from business travelers and tourists. Rural STRs, while seeing growth in bookings, often experienced more fluctuation in occupancy. For example, seven of the ten municipalities with occupancy rates of .4 or higher are urban, including Derry, New Hope, and Edinboro at the top (0.51, 0.45 and 0.44 respectively). The lowest occupancy rates are found in municipalities in rural counties, specifically, Huntingdon, Stroudsburg, and Hawley (0.32, 0.29, and 0.27 respectively). As noted above, rentals for municipalities in rural areas generate a million less on average than rentals in municipalities in urban areas. *Per unit* however, any rural/urban difference disappears; the highest mean or median revenues are generated by municipal STRs in both rural and urban counties alike, and the lowest mean/median revenues are in urban Allentown, Harrisburg and Scranton.

The analysis of STRs within the municipalities and their surrounding five-mile areas showed distinct differences in both the number of STRs and their economic performance. In urban areas like Harrisburg and Erie, the number of STRs within the surrounding five miles significantly exceeded the numbers within the municipality itself, with higher ADRs and revenue figures. This suggests a broader market appeal and potentially more diversified economic activities supporting STRs in the surrounding regions. In contrast, areas such as Gettysburg and Jim Thorpe showed a less pronounced difference between the STRs in the municipality and the surrounding areas. While there is still a notable presence of STRs in the surrounding regions, the revenue and ADR figures did not vary as dramatically as in urban counties. This indicates that rural STR markets are more localized and perhaps less influenced by broader regional economic factors compared to their urban counterparts.

Conclusion

This study provides a solid inventory and baseline overview of STRs within Pennsylvania. The growth in STRs and the sharing economy is predicted to grow and thus it is important to consider how this trend can provide opportunities to increase tourism, employment, and economic development while protecting affordable housing, public services, and unsafe practices. The inventory and time series maps produced by this project provide visualizations of the diverse nature of STRs and their geographic locations within Pennsylvania. The research serves as a baseline for municipalities and the General Assembly to inform regulations, ordinances, and policies to accommodate the needs of both residents and tourists. In rural areas, this may focus on addressing the unique challenges posed by increased tourism, such as enhanced transportation options, recreational facilities, access to outdoor activities, attractions that cater to visitors, and ensuring the availability of emergency response services and healthcare. In urban areas, this may include managing the extra strain on existing services, and policy makers may consider allocating funds to upgrade public transportation systems or increase waste and sanitation services.
